KANSAS

Teenage Pregnancy Report Kansas, 2000

KANSAS TEENAGE PREGNANCY REPORT

The Kansas Department of Health and Environment (KDHE) annually publishes a teenage pregnancy report, summarizing data collected from vital records on fetal deaths, abortions, and live births. The total of these three elements represents the number of pregnancies. KDHE has compiled nine tables containing pregnancy totals and pregnancy rates for the following age-groups 10-17, 15-17, 10-14, and 15-19 by county of residence.

List of Tables

Teenage Pregnancies for 10-17 Year Olds by County of Residence, Kansas, 2000

Teenage Pregnancies (10-17 years of age) by County of Residence, Kansas, 1996-2000

Teenage Pregnancy Rates (10-17 years of age) by County of Residence, Kansas, 1996-2000

Teenage Pregnancies for 15-17 Year Olds by County of Residence, Kansas, 2000

Teenage Pregnancies (15-17 years of age) by County of Residence, Kansas, 1996-2000

Teenage Pregnancy Rates (15-17 years of age) by County of Residence, 1996-2000

Teenage Pregnancies for 10-19 Year Olds by Component, by County of Residence, Kansas, 2000

Teenage Pregnancy Rates (10-14, 15-19 years of age) by County of Residence, Kansas, 1996-2000

Teenage Pregnancy Rates (10-19 years of age) by County of Residence, Kansas, 1996-2000

Technical Notes

Abortion (induced

termination of pregnancy):

The purposeful interruption of pregnancy with the intention other than to produce a live-born infant or to remove a dead fetus and

which does not result in a live birth.

Fetal Death: Any complete expulsion or extraction from its mother of a product

of human conception, the weight of which is in excess of 350 grams, irrespective of the duration of pregnancy, resulting in other than a live birth, and which is not an induced termination of

pregnancy.

Live Birth: The complete expulsion or extraction of a product of human

conception from its mother, irrespective of the duration of pregnancy, that, after such expulsion or extraction, shows any evidence of life such as breathing, heartbeat, pulsation of the umbilical cord, or voluntary muscle movement, whether or not the

umbilical cord has been cut or the placenta attached.

Population:

U.S. Census Bureau population estimates and counts were obtained on the Internet at: http:\\www.census.gov/

1996 female 10-17 and 10-19 age-group county population estimates were compiled by the Kansas Department of Health and Environment based on 1990 U.S. Census Bureau totals. 1997-1998 female 10-17 and 10-19 age-group county population estimates were compiled by the U.S. Census Bureau as of 7/1/97 and 7/1/98.

County estimates were then adjusted to the 1996-1998 Census totals for the state.

1999 state and county female 10-17 and 10-19 age-group population estimates were compiled by the U.S. Census Bureau as of 7/1/99 (Internet release date: 8/30/00).

1996-1999 state and county female 15-17 age-group population estimates were compiled by the U.S. Census Bureau as of July 1 of each year (Internet release date: 8/30/00).

2000 female age-group county population counts were compiled by the U.S. Census Bureau as of 4/1/2001.

Rate Reliability:

Vital statistics are easily influenced by random variation, and single-year rates can fluctuate from year to year. A multiple-year rate, such as a 5- or 10- year average of single-year rates, would be more accurate in formulating conclusions on vital events. For example, between 1996 and 2000, the teenage pregnancy rate for Kansas varied from 30.3 to 33.9 teenage pregnancies per 1,000 10-19 female population. The 1996-2000 5-year teenage pregnancy rate was 32.4. The 5-year rate smooths some of the variation in single-year rates and would be a more reliable indicator of teenage pregnancy rates in Kansas.

Rates based on a small or large number of events in a sparsely populated area can vary widely. To exemplify the variation that may occur with a small change in the number of events, in 2000, Comanche County had the lowest 10-19 female population in Kansas at 108 and Sedgwick County had the highest at 33,346. With 2 teenage pregnancies occurring in Comanche County in

2000, the 10-19 teenage pregnancy rate was 18.5; whereas 1,276 teenage pregnancies occurring in Sedgwick County resulted in a teen pregnancy rate of 38.3 per 1,000 10-19 female population. If 5 more teenage pregnancies had occurred in each county, Comanche County's teenage pregnancy rate would have increased to 64.8, while Sedgwick County's rate would have increased only slightly, to 38.4 teenage pregnancies per 1,000 10-19 female population. Therefore, one must use caution when comparing rates of vital events between counties of significantly different population sizes to avoid misleading conclusions.

Residence Data: Residence data is information compiled according to the usual

residence regardless of where the event occurred (including events

occurring out-of-state).

Teenage Pregnancy: A live birth, fetal death or abortion occurring to a female under 20

years of age.

Teenage Pregnancy Rate: live births, fetal deaths,

abortions for females

<u>in a specific age-group</u> x 1,000

female population in a specific age-group

^{*}Rate per 1,000 female 10-17 age-group population

Teenage pregnancies include the sum of live births, reported abortions and fetal deaths.

The 1996 female 10-17 age-group county population estimate was compiled by the Kansas

Department of Health and Environment based on 1990 U.S. Census Bureau totals.

^{1997-1998 10-17} female age-group county population estimates were compiled by the U.S. Census Bureau as of 7/1/97, and 7/1/98. County estimates were then adjusted to the 1996-1998 Census totals for the state.

^{1999 10-17} female age-group county population estimates were compiled by the U.S. Census Bureau as of 7/1/99.

^{2000 10-17} female age-group county population counts were compiled by the U.S. Census Bureau as of 4/1/2001. Source: Kansas Department of Health and Environment
